

**ARTICLE VIII**  
Billing

Billing for sewer service will be at the rate established by the Town Council and will be based on water usage as determined by water meter readings. If a private well, or other water source is used, the Town will install a meter between the water source and the building. Readings on the meter will serve as the means for computing sewer service charges. At its discretion, the Town may install a meter directly on the sewer line to measure flow. In which case, the sewer meter readings will serve as the basis for billing. In the event no meter is installed, a rate of 9,000 gallons per bi-monthly billing period will be assessed for single family homes, with a proportionate charge determined and assessed by the Town Council for non-single family homes.
